

Z-Drive & Tornado

The Zacuto Z-Drive is a unique, universal direct drive follow focus, designed with single operator shoulder mounted rigs in mind.

Because it has a universal joint and no internal gears it can't develop play. It attaches to a single 15mm diameter rod. The Tornado grip connects to the Zacuto Z-Drive follow focus via a standard whip port.

Due to the unique 60 degree curved shape of the Z-Drive and the comfortable horn shape of the Tornado grip, this product is particularly useful in Zacuto's Recoil style setups where the camera is directly over your shoulder.

Parts & Features

Pull down Tornado lock to remove or attach the Tornado to the Z-Drive

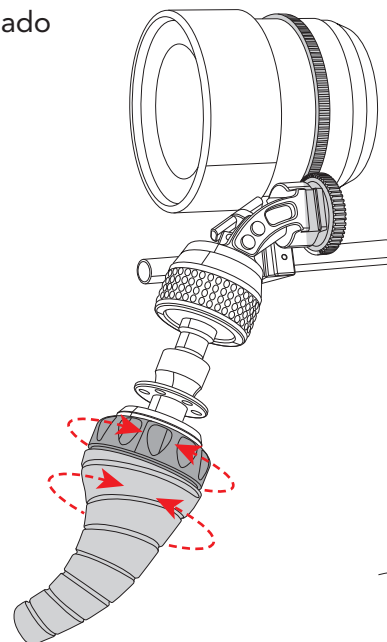

Mounting Z-Finder & Tornado

Mount your Z-Drive & Tornado to your rig by using the 15mm rod port. The position can be adjusted and tightened in place by using the ratcheting lever.

Operating Z-Drive & Tornado

Align the Z-Drive's lens gear to your camera lens focusing gear.

Suggested hand position shown below has thumb pointer and middle finger on focusing wheel.
